

SonoSuede™ HD

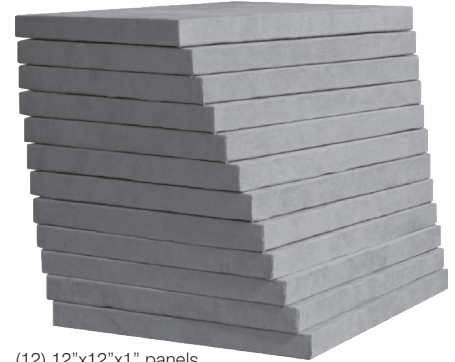

Sound Absorption Panels HOME DESIGN™

Contents: 12 - Impaler clips, 24 - Drywall screws, 12 - 12x12x1 SonoSuede HD panels

Congratulations! You have taken the first step toward better acoustics by purchasing the Auralex Acoustics SonoSuede™ HomeDesign (HD) Kit. As the technology of consumer electronics continues to evolve, sound control solutions need to meet greater acoustical demands while maintaining aesthetic appeal. The SonoSuede™ HD Kit offers a sophisticated look with our SonoSuede Fabric that is perfect to coordinate with the decor of your home.

(12) 12"x12"x1" panels

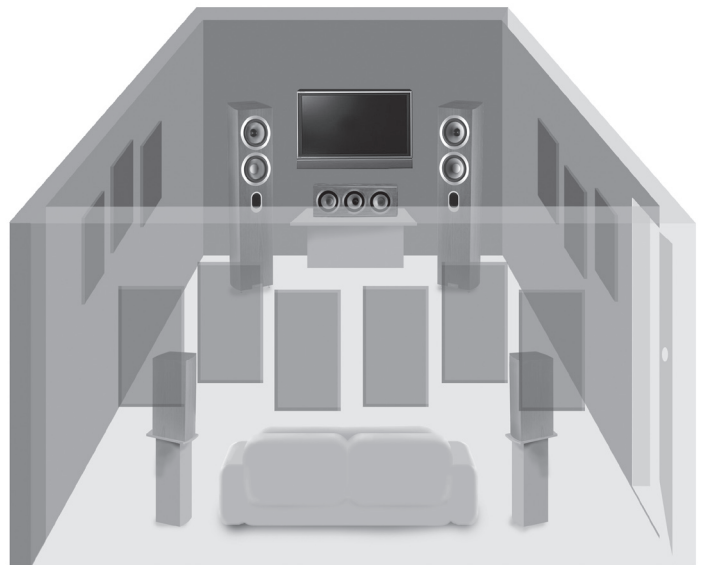

The SonoSuede™ HD kit can help control excessive reverberation and room ring that can be caused by hard surfaces like drywall, concrete or wood. Spreading the SonoSuede™ HD panels out on the walls can help absorb unwanted sound energy so you can hear your music and movies as they were intended to be heard.

Panel Placement Tips:

- A. The panels included in the SonoSuede™ HD kit can be distributed on the side walls halfway between the main seating position and the speakers themselves. The number of panels and the placement on each surface can vary given your specific situation.
- B. Placing panels on the front wall behind the speakers is beneficial to reduce the energy that would normally reflect off of this surface.
- C. The rear wall behind the listening position (opposite the front speakers) is a good location for absorption panels. This is increasingly more important the closer you sit to the rear wall.
- D. The height of the panels should be centered at ear/listening level. Typically you may disregard the bottom 24" of each wall surface.
- E. Remember that these are only guidelines. If you have furniture or audio/video equipment in the way, simply work around it best you can.

SonoSuede HD is great, what else can I do to improve the acoustical quality of my room?
