

FOR IMMEDIATE RELEASE

AURALEX ACOUSTICS UNVEILS AUDIOTILE™ AT AES 2005

NEW YORK CITY, October 7, 2005—Auralex Acoustics, Inc., the industry leader in innovative sound control solutions, is proud to announce the availability of AudioTile™ at AES 2005, booth #150. AudioTile provides an attractive means of blending absorption, diffusion, and reflection for optimum acoustical balance.

“Taming the acoustics of a room is an essential element for capturing and reproducing high quality audio performances,” says Jeff Szymanski, chief acoustical engineer for Auralex. “AudioTile accomplishes this while offering attractive design options that will make each installation unique.”

Designed by Russ Berger for Auralex Acoustics, AudioTile redefines the aesthetics of acoustical absorption. Tessellated forms present unlimited design possibilities for a sophisticated, custom appearance precisely tailored to the user’s desired acoustical performance. Varying thickness built into each component delivers excellent broadband absorption, while the design patterns allow a unique means of blending absorption, diffusion, and reflection for optimum acoustical balance. Auralex’s proprietary Studiofoam™ formula provides superior durability and Class B flame retardancy.

The patent-pending AudioTile is one of the first offerings in the new pArtScience product line, a family of acoustical treatments designed for exceptional performance with a custom look, all at an affordable price.

About Auralex Acoustics

Located in Indianapolis, Auralex Acoustics was founded in 1977 with a mission to provide the best acoustical treatment products at the best value. Since then, thousands of satisfied Auralex customers have experienced improved acoustics, solid advice and exceptional customer service. Auralex products enjoy widespread use among many prominent artists, producers, engineers and corporations.
