

# Sunburst-360™ w/ Mini-LENRDs™

## USER GUIDE

Thank you for purchasing the **Auralex® Sunburst-360™**. This is a highly effective portable acoustic absorption device that can be easily positioned anywhere in a room to achieve the desired effect.

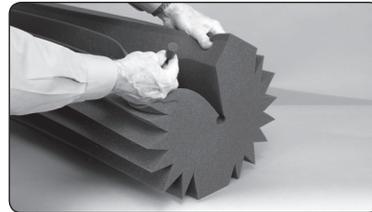

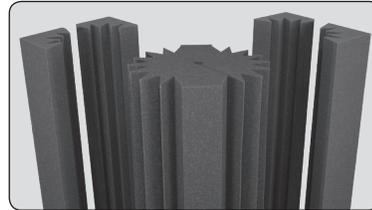

- 1 Set up stand by firmly tightening the pole into the base. Extend the top tube and firmly tighten the adjustment collar.

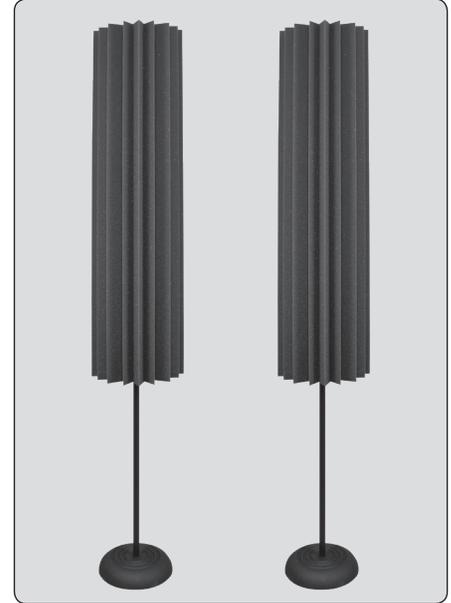

- 2 Remove star washer from the top of the stand and add the 19" stand extension tube.

- 3 Lay the **Sunburst-360** on a flat surface and remove the four **Sunburst 'Mini-LENRD'** panels. Open up the slit in the side of the center part and remove the foam tube from the stand hole. The **'Mini-LENRDs'** can be mounted in your room's corners as low frequency absorbers or configured together on the wall for broadband absorption. Several different **Auralex** adhesive solutions can be used to mount these panels, see **Auralex.com** for more information.

- 4 Position the **Sunburst-360** in your room where control of acoustical reflections is needed. Corner placement will emphasize absorption of low frequencies.

**Real-World Acoustics®**
